

Green Power Community Challenge Rankings – as of June 14, 2013

Over the span of a year, EPA GPCs will track and report their collective green power use and green power percentage of total electricity use. GPCs are ranked according to these two categories on a quarterly schedule. At the conclusion of the Challenge, the community that has the highest green power percentage and the community that uses the most kilowatt-hours (kWh) of green power will receive national recognition and special attention from EPA. View the rankings below.
